STEP TWO: Install the forks to your tower with a spacing of 7" to 9" between forks. Each fork should be attached with 2 of the bolts provided.

Use bungee to secure boards to the rack.

Note: All bolts should be checked on a regular basis to ensure tightness. The normal vibration of a boat could loosen the screws and the rack could slip.

Check the bungee periodically and contact XTP for a replacement if you see fraying or UV damage that could weaken the cord and cause it to not hold boards tight.

To add luster to your racks, wipe with a clean cloth and a small amount of baby oil. **Never use acetone-based products** to clean forks. This may cause rubber protectors to come out of forks.
